

Save Your Life! Don't Believe These **10 MYTHS** About **GHOULS** and **MALECTOPLASM**

- 1. It's OK to move near malectoplasm as long as you're quiet.**
No, it's the movement that stimulates Ghoul-creation, not the sound.
- 2. Music bothers them.**
Nothing "bothers" a Ghoul. They can't hear. They just kill. Period.
- 3. Water can wash malectoplasm away.**
Malectoplasm is not water-soluble. Water can move it, but not destroy it.
- 4. Burning down a structure destroys the malectoplasm inside.**
Under intense heat, malectoplasm simply "re-spores" to form elsewhere.
- 5. Spraying Ghoo on malectoplasm before it forms makes it easier to kill the Ghoul that forms from it.**
Ghoul-killing substances have no effect on pre-formed malectoplasm.
- 6. Outdoor malectoplasm isn't as likely to be activated as malectoplasm found indoors.**
All malectoplasm forms into Ghouls. There are NO exceptions.
- 7. It's easy to outrun a Ghoul.**
Think about it: Do you know ANYONE who has ever outrun a Ghoul?
- 8. Ghouls can't form in direct sunlight.**
Spores tend to avoid sunlight, but Ghouls will form ANYWHERE.
- 9. Ghouls can't see in the dark.**
They can't see at all. They're reacting to life presence, not visual targets.
- 10. Ghouls tend to avoid children.**
Ghouls don't have the awareness to "avoid" anything.
